充電與操作

您的牙刷具備電壓安全性,可在浴室放心使用。

 您可立即使用牙刷,或將其置於插電的充電器(f)上短暫 的充電。

附注:如電池沒電(充電時充電指示燈(e)未 亮或按下開/關鍵(c)時沒有反應),至少充電 30分鐘。

 刷柄充電時,刷柄上的綠色充電指示燈(e)閃爍。電池充 滿後,指示燈熄滅。完全充電需要12個小時,可提供最長 約兩周正常刷牙(每天2次,每次2分鐘)所需的電量,實際 使用時間依具體情況而定(圖1)。

- 當電池電量不足時,紅色充電指示燈(e)會在牙刷開/關時 閃爍幾秒,且馬達會降低轉速。當電力耗盡時,馬達將停止 運轉,至少需要充電30分鐘才能滿足一次日常使用。
- 您可以長期將牙刷刷柄放置在連接電源的充電器底座上, 設備配備有電池過充防護。

牙刷的使用

刷牙技巧

沾濕刷頭並擠上任一種牙膏。

為了避免水花飛濺,在啟動電動牙刷前將刷頭放置於口腔 內(圖2)。當您使用任一種歐樂-B刷頭時,引導刷頭在牙縫間 緩慢移動,在每顆牙齒表面上停留數秒(圖5)。

無論使用任何刷頭,請勿忘記清潔牙齒的三個面:咀嚼面、牙 齒外側及牙齒內側。均勻地刷洗口腔的4個刷牙區間。您也可 諮詢您的牙醫或牙齒保健專家以瞭解適合您的刷牙技巧。 使用任何電動牙刷的頭幾天,您的牙齦可能會輕微流血。此現

象通常會在幾天內消失。如使用兩周後仍有持續出血現象,請 諮詢您的牙醫或牙齒保健專家。如您有敏感性牙齒及/或牙 齦,歐樂-B推薦您使用"柔護"模式(按型號而定)(也可選擇 歐樂-B超軟毛刷頭搭配使用)。

刷牙模式(按型號而定)

《日常清潔》 -日常清潔的標準模式

《柔護》 -輕柔徹底的清潔敏感區域

《亮白/抛光》-亮白抛光模式,可偶爾或日常使用

《牙齦按摩》 - 溫和按摩牙齦,幫助保持牙齦健康

模式切換

您的牙刷啟動後自動進入《日常清潔》或《柔護》模式(按型 號而定)。如需切換到其他模式,連續按下開/關鍵。開閉牙 刷則長按開/關鍵直到馬達停止。

專業計時器

計時器每30秒會以短提示音提醒您均匀的刷洗口腔內的四個 刷牙區間(圖3)。一聲長音表示已到達專家推薦的2分鐘刷牙 時間。如在刷牙過程中關閉牙刷,計時器仍能記錄保存已經使 用過的30秒刷牙時間,如暫停時間超過30秒,計時器將會重置。

壓力感應

如施加壓力過大,壓力感應燈(b)(根據產品型號而定)將亮 起紅燈,提醒你減輕壓力。

此外,刷頭的前後震動將會停止,左右震動將減慢(使用《日常 清潔》及《柔護》模式)(圖4)。

請在使用中通過稍微按下刷頭,定期檢查壓力感應作用是否 正常。

刷頭

歐樂-B多動向交叉刷頭 EB50

這是歐樂-B先進的牙刷刷頭。 刷毛有專門的角 度,以實現精準清潔。 能夠鬆動和強力清潔牙 菌斑。

歐樂-B超細毛*護齦刷頭EB60

結合日常清潔刷毛與超細刷毛,給予你溫和呵護 的口腔清潔體驗。

*指外圈刷毛,對比P&G普通電動牙刷刷毛

大部分歐樂-B電動牙刷頭都配有顯示刷毛幫助您檢查是否需 要更換刷頭。 隨著每天刷牙兩次, 每次兩分鐘的徹底口腔清 潔,刷毛會在大約3個月內褪色, 提醒您需要更換刷頭。 若在 褪色前刷毛外張,這也許是您過度用力清洗牙齒和牙齦所致。

我們不推薦使用矯正牙套人群使用歐樂-B牙線效果型刷頭或 歐樂-B 專業亮白拋光刷頭。您可以使用歐樂-B矯正護理型刷 頭,專門為清潔牙箍和鋼絲區域而設計。

清潔提示

刷牙結束後,請保持刷柄開關打開,並將刷頭置於自來水下沖 洗。關閉電動牙刷並取下刷頭。

將刷柄及刷頭分開清潔,擦乾後再重新裝好。

清潔前將充電器 (f) 拔除。

可使用洗碗機清洗刷頭存放盒/護蓋(h)及刷頭固定器(g)。 僅可使用濕布清潔充電器(f)、旅行盒(i)及充電器袋(j) (圖6)。旅行盒(i)內只可放置經清潔及乾燥的刷柄/刷頭。

如有更改,恕不另行通知。

Charging and Operating

Your toothbrush is electrically safe and designed for use in the bathroom.

- You may use your toothbrush right away or charge it briefly by placing it on the plugged-in charger (f).
- Note: In case the battery is empty (no charging light illuminated (e) while charging or no reaction when pressing the on/off button (c)), charge at least for 30 minutes.
- The charge indicator light (e) flashes green while the handle is being charged. Once it is fully charged, the light turns off. A full charge typically takes 12 hours and enables at least 2 weeks of regular brushing (twice a day, 2 minutes) (picture 1). Note: After deep discharge, the charge indicator light might not flash immediately; it can take up to 30 minutes.
- If the battery is running low, the charge indicator light (e) flashes red for a few seconds when turning your toothbrush on/off and the motor is reducing its speed. Once the battery is empty, the motor will stop; it will need at least a 30-minute charge for one usage.

Note: Store handle at room temperature for optimal battery maintenance.

Caution: Do not expose handle to temperatures higher than 50 °C. Recommended ambient temperature for charging is 5 °C to 35 °C.

Using your toothbrush

Brushing technique

Wet brush head and apply any kind of toothpaste. To avoid splashing, guide the brush head to your teeth before switching on the appliance (picture 2). When brushing your teeth with one of the Oral-B **oscillating-rotating brush heads** guide the brush head slowly from tooth to tooth, spending a few seconds on each tooth surface (picture 5).

With any brush head do not forget to brush all 3 surfaces of your teeth: chewing, outer and inner surfaces. Brush all four quadrants of your mouth equally. You may also consult your dentist or dental hygienist about the right technique for you.

In the first days of using any electric toothbrush, your gums may bleed slightly. In general, bleeding should stop after a few days.

Should it persist after 2 weeks, please consult your dentist or dental hygienist. If you have sensitive teeth and/or gums, Oral-B recommends using the «Sensitive» mode (depending on model) (optional in combination with an Oral-B «Sensitive» brush head).

Brushing modes (depending on model)

«Daily Clean» -	Standard for daily cleaning
«Sensitive» -	Gentle, yet thorough cleaning for sensitive areas
«Whitening» –	Exceptional polishing for occasional or everyday
	use
«Gum Care» –	Gentle massage of gums

UTHORIZED POA-00319425 Rev 001 Effective Date 2021-08-13 Printed 2

How to switch between modes:

Your toothbrush automatically starts in the «Daily Clean» or «Sensitive» mode (depending on model purchased). To switch to other modes, successively press the on/off button. Switch off the toothbrush by holding the on/off button until the motor stops.

Professional Timer

A short stuttering sound at 30-second intervals reminds you to brush all four quadrants of your mouth equally (picture 3). A long stuttering sound indicates the end of the professionally recommended 2-minute brushing time. If the toothbrush is turned off during brushing, the elapsed

In the toorhordships turned on during brushing, the elapsed brushing time will be memorised for 30 seconds. When pausing longer than 30 seconds the timer resets.

Pressure sensor

If too much pressure is applied, the pressure sensor light (b) (depending on model) will light up in red, notifying you to reduce pressure. In addition the pulsation of the brush head will stop and the oscillation movement of the brush head will be reduced (during «Daily Clean», and «Sensitive» mode) (picture 4). Periodically check the operation of the pressure sensor by pressing moderately on the brush head during use.

Oral-B CrossAction brush head Our most advanced brush head. Angled bristles for a precise clean. Lifts and powers away plaque.

<u>Oral-B Sensitive Clean brush head</u> features a combination of regular bristles to clean teeth surfaces and ultrathin bristles for a gentle brushing experience on the gumline.

Most Oral-B brush heads feature INDICATOR® bristles to help you monitor brush head replacement need. With thorough brushing, twice a day for two minutes, the color will fade halfway approximately within 3 months, indicating the need to exchange your brush head. If the bristles splay before the color recedes, you may exert too much pressure on teeth and gums.

We do not recommend using the Oral-B «FlossAction» or Oral-B «3D White» brush head with braces. You may use the Oral-B «Ortho» brush head, specifically designed to clean around braces and wires.

Cleaning recommendations

After brushing, rinse your brush head under running water with the handle switched on. Switch off and remove the brush head. Clean handle and brush head separately; wipe them dry before reassembling. Unplug the charger (f) before cleaning. Brush head compartment/protective cover (h) and brush head holder (g) are dishwasher-safe. The charger (f), travel case (i) and charger pouch (j) should be cleaned with a damp cloth only (picture 6). Make sure to store only cleaned and dried handle/brush heads in the travel case (i).

Subject to change without notice.

INTENDED USE:

This product is a device for estimating body composition by measuring the local bio-impedance value of the user's body. Used to measure body weight, body fat, body water, muscle mass, bone mass, BMI and basal metabolism, wireless transmission.

- This scale is not suitable for people with pacemakers or other medical implants. The indication of body fat may be inaccurate in the event of diabetes or other medical/physical conditions. The same applies to highly trained sportsmen.
- The body fat measurement algorithm is calibrated for individuals between the ages of 6 and 80 years old. Users outside of this age range can only use the weight measurement feature.
- The device uses Bioelectrical Impedance Analysis (BIA) and it may cause a weak current while taking measurement. So it's not recommended for pregnant women use.
- · Any treatment or diet for overweight or underweight requires qualified advice from appropriate specialists (doctor, dietician). The values determind with the scale can be of help.
- Risk of tilting! Never place the scales on an uneven surface. Never step onto just one corner of the scale. While weighing, never stand on one side or on the edge of the scale.
- Danger of slipping! Never step onto the scale with wet feet. Never step onto the scale while wearing socks.
- Use the device only as directed by the instruction manual. In the event of misuse, all warrantees become null and void
- The scale is manufactured for home or personal use. It is not intended for commercial use in hospitals or other medical facilities.
- Do not use the device if it does not work properly, if it has been dropped, dropped into water or damaged.
- The scale has a measuring range up to 180 kg/396 lbs. Do not overload the scale.
- Place the scale on a firm level surface. Soft, uneven surfaces are unsuitable for measurement and lead to wrong results.
- Place the scale in a location where neither extreme temperatures nor extreme humidity are present.
- Please handle the scale with care. Avoid shocks and vibrations of the scale. Do not drop it. • Stand carefully on the scale. Do not hop or jump on the treated surface, as this may damage the weighing mechanism
- Do not attempt to disassemble the device. Otherwise the warranty will become void. This device does not contain any parts that can be serviced or replaced by the user.
- In the event of malfunctions, do not proceed with any unauthorised repair of the device. Otherwise, this will void any warranty claims. Have repairs performed only by an authorised service centre.

Battery safety instructions

- If a battery is swallowed, consult a doctor immediately!
- Insert the batteries correctly, paying attention to the polarity!
- Keep the battery compartment closed properly!
- Keep the batteries out of the reach of children!
- Do not re-charge the batteries! There is a risk of explosion!
- Do not short-circuit the device! There is a risk of explosion!
- Do not throw into a fire! There is a risk of explosion! Store unused batteries in the packaging and not near metal objects to avoid a short circuit!

Scope of delivery

- The percentage of body fat, body water, muscle mass, bone weight, as well as body mass index (BMI), the values of the basal metabolic rate (KCAL) are to be considered only as approximate data. For any further information, refer to a doctor or to a dietician. • Self-measuring means control, it does not mean diagnosis or treatment. Any unusual levels
- should always be discussed with your doctor. Under no circumstances must you change the dose of medicines prescribed by your doctor.

How a body analysis scale works

medisana body analysis scale is tested by the Bioelectrical Impedance Analysis (BIA) method. The principle of Bioelectrical Impedance Analysis (BIA) is to apply weak current to body through the electrodes on the surface of scale, and use the theory that water in the body conducts electricity while fat does not, thereby measure the body's resistance. Then based on sample data, the body fat content is calculated by comparison.

Low-frequency current: obtain extracellular intelligence; high-frequency current: gain extracellular and
Intracellular intelligence

Fatty tissue: Poor electrical conductivity

Non-fatty tissue: Better conductivity with more electrolyte

The body is divided into fatty tissue and non-fatty tissue according to above principle, and the resistance feedback of the two is also different. The body analysis scale calculates the proportion of different components of the body through data feedback and calculation.

After the first measurement, the scale will be able to automatically recognize you based on the previous weight.

Body weight	Body weight refers to "the sum of all organs and metabolites in the body", which includes bones, muscles, fat, blood, internal organs, metabolic waste, and many other indicators. However, the largest proportion among them is water.	
Body fat	Body fat percentage refers to the ratio of body weight in fatty tissue. Body fat (٪) = Body fat weight (kg) Body weight (kg) x 100%	
Body water	Body water ratio accounts for the largest ratio of body weight. Body water (٪) = Weight of body water Weight of body fluid x 100%	
Muscle ercentage	Muscles are non-fatty tissues in the body, and the body uses energy to maintain body temperature. When muscle mass is reduced, the body uses less energy. Muscle is also the body tissue that supports posture and heartbeat.	
Bone	Bone weight refers to the weight of bone tissue (including bone mineral	

levels, calcium, or other minerals) in the body composition, is indicative of bone health Basal Metabolic Rate (BMR) refers to the minimum requirement rie nent of calories that the human body needs to maintain life under static conditions

Body Mass Index (BMI) is the relationship between weight and height, body fat and health risk.

里需求 代謝率	基礎代謝率(BMR)指人體於靜態情況下,維持生命所需最低熱量消耗的卡路里數。
∕II值	身體質量指數(BMI)是體重與身高、體脂及健康風險之間的相關指 標。 BMI = ^{體重(kg)} 身高(m) ²
